

User Manual

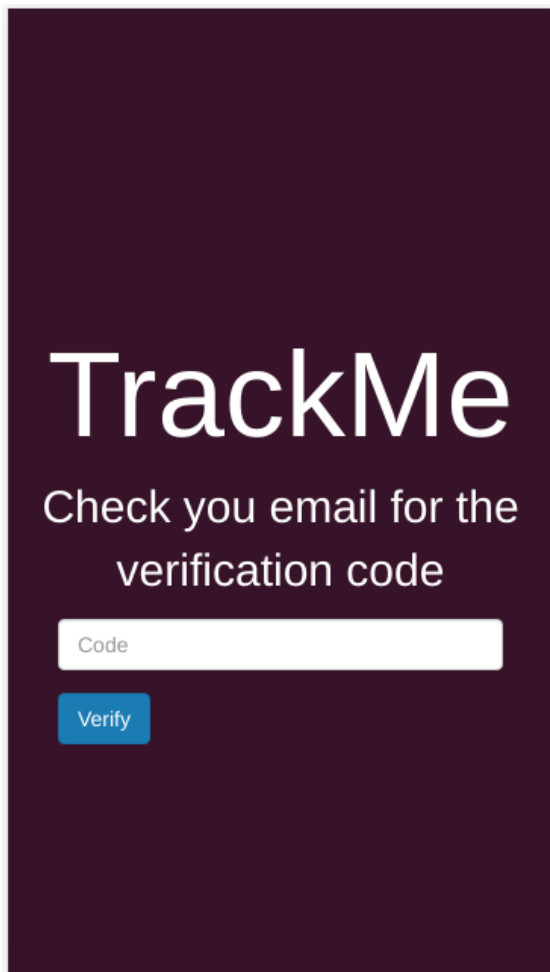

The application is really simple, it is based on 3 main views:

Login/Signin view

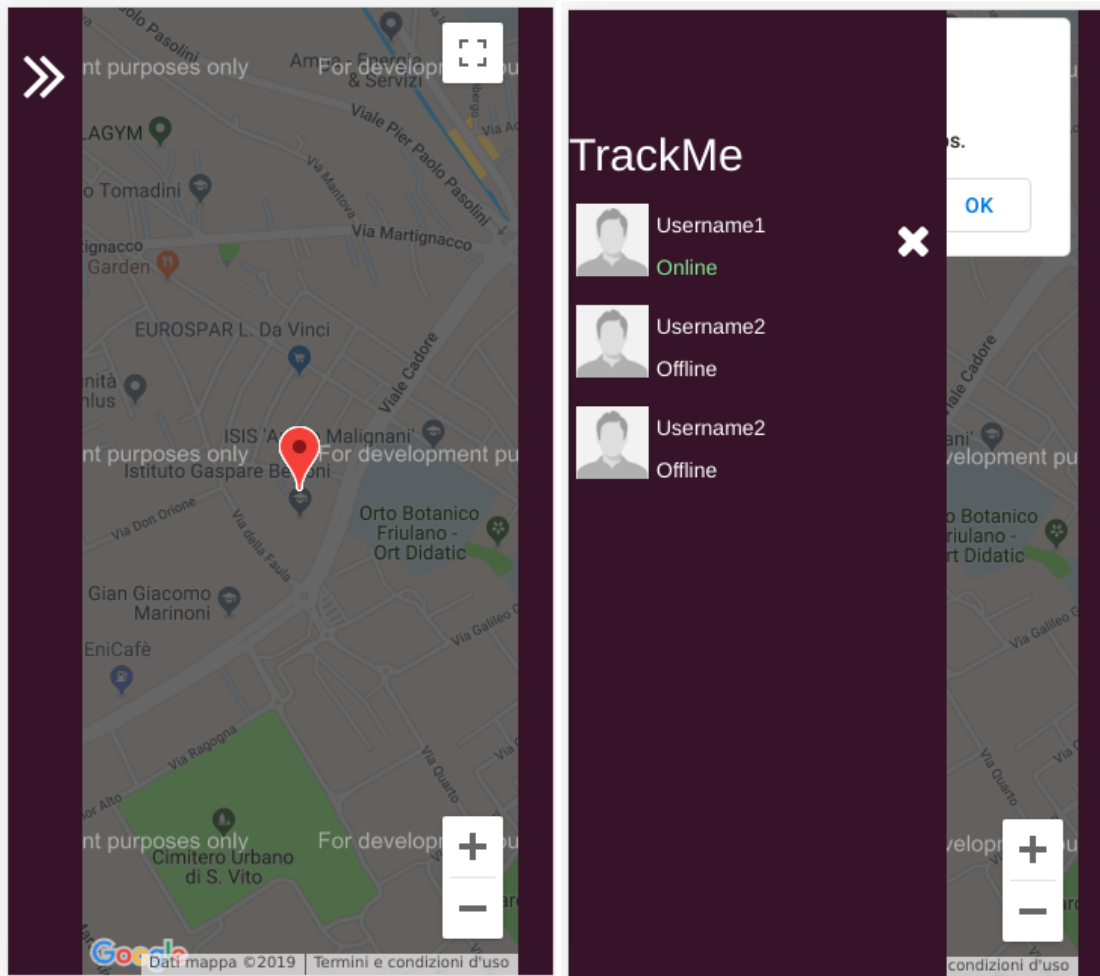

this first view allows to register yourself or login

Check view

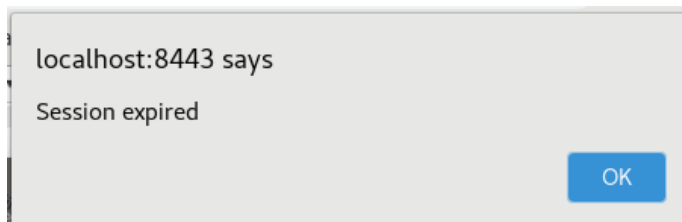

In case of sign-in the user needs also to validate his credentials with a second authentication check (a numeric code sent via mail)

Main view

Once session token is created, the user can see his friends positions and state, and the user position is stored every second in the db

After a while session token will expire and user is redirected to the login page
